Fall 2007

## Free Time Trial of DataStage SE Transform Accelerator!

*For a limited time, Innovative Routines International, Inc. (IRI) is offering a free time trial of the CoSort Plug-In for DataStage SE.*

*Fixed-key, ASCII Sort on 4-CPU IBM p650*

## Could Your DataStage Server Edition Use a “Turbo Boost”?

Dramatically improve high-volume sort times with the CoSort Plug-In for DataStage SE, a parallel processing alternative to DataStage native sort transforms. Requiring no interface changes, this plug-in accelerates DataStage SE performance up to 10X's. Subsequent join, aggregation, and load runtimes should improve as well.

Standard and Enterprise Edition performance can also be accelerated using CoSort for external aggregation, join, and load pre-processing. For more ideas and information, go to: [http://www.cosort.com/solutions/ETL\\_DB\\_Acceleration/DataStage](http://www.cosort.com/solutions/ETL_DB_Acceleration/DataStage).

CoSort products leverage the popular Meta Integration Model Bridge (MIMB) for automated CoSort metadata integration to a broad array of products. For DataStage/CoSort implementations, MIMB converts DataStage .dsx layouts to CoSort data definitions.

## It's Easy to Test!

Just download a Product Evaluation NDA from <ftp://ftp9.cosort.com/pdf/EvalRequest.pdf>, complete and fax to 321-777-8886 or scan/email to [info@cosort.com](mailto:info@cosort.com). IRI Support will get you up and running benchmarks in no time!

### About IRI

Founded in 1978, IRI developed CoSort, the first commercially available sort package for UNIX. Today, the CoSort product line has grown into a robust, high-performance suite of data manipulation tools used by developers in many of the largest IT shops around the world.
