SAP Partner

IRI — Total Data Management

IRI Joins SAP PartnerEdge Open Ecosystem

IRI joined the SAP PartnerEdge program in Q3'19 to improve and promote the following:

1. All IRI software products support SAP HANA and Sybase IQ and ASE directly, for data profiling and searching, data integration (ETL), data migration, data governance (e.g., PII data masking for GDPR compliance, DAM/DAP, data quality), and analytics.

2. CoSort jobs in Voracity prepare (filter, transform, cleanse and mask) big data for SAP Business Objects (BOBJ), cutting times to display and analytic results at least in half.

PREPARATION **V**oracity

HIGH SPEED **DATA WRANGLING**

IRI Voracity ® *featuring the original data preparation engine, IRI CoSort, and seamless Hadoop options for data transformation, cleansing, and masking*

3. Like SAP, IRI supports Digital Business via Voracity, thus sharing key SAP goals and adding value to to SAP customer digital transformation projects in multiple ways.

4. Voracity also supports important IoT paradigms -- aggregation on the edge and IoT wrangling/analytics -- to help SAP larger sites speed and secure IoT data delivery.
